

APPENDIX G
VARIANCE REPORTS

**INTERNATIONAL
TECHNOLOGY
CORPORATION**

Variance No: PARCEL500(7)JANUARY01.VR1
 Linked w/NC No: X
 Date of Issue: 1/31/00

Page 1 of 1

Project Name: **Fort McClellan - CK05 Modification**

Project Number: 774645.15020300

-Variance Report -

I. Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN TRENCHES WEST OF IRON MOUNTAIN ROAD PARCEL 500(7):

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed a residuum monitoring well and groundwater sample from monitoring well location FTA-500-MW03. Monitoring well FTA-500-MW03 was installed, but a groundwater sample was not collected for chemical analysis.

Identified by: Jeffrey Tarr, PG – IT Site Manager

Date: 1-31-01

II. Justification for Variance:

During drilling activities using hollow-stem augers, refusal was encountered at approximately 74 feet below ground surface (bgs) and bedrock was not present. A decision was made by the IT Site Manager to drill deeper using air rotary drilling techniques. During drilling activities using air rotary drilling bedrock was encountered at approximately 97 feet bgs and groundwater was not present. Monitoring well FTA-500-MW03 was installed on top of bedrock at the request of the Army Corps of Engineers. Several attempts were made to collect a groundwater sample from monitoring well FTA-500-MW03, but all attempts were unsuccessful because the well was dry.

III. Applicable Document/Work Plan: (by the person identifying the change)

Final Site-Specific Field Sampling Plan, Trenches West of Iron Mountain Road Parcel 500(7), October 1999.

Distribution List:

1. Jeanne Yacoub, IT Project Manager
2. Steve Moran, IT Technical Lead
3. Jeffrey Tarr, IT Site Manager
4. Randy McBride, IT QA Officer
5. Mr. Ellis Pope, US Army Corps of Engineers
6. Mr. Ross McCollum, US Army Corps of Engineers

- Signatures -

Requested by: Jeffrey Tarr, PG - IT Site Manager *Jeffrey Tarr* 2/5/01 Date

Approved by: *Ellis C. Pope* 2/7/01 Date

Project Manager Approval: *Jeanne Yacoub* 2/8/01 Date

QA Approval: *Randy McBride* 2/14/01 Date

^aResults of duplicate analyses were averaged and nondetects were treated as one-half the detection limit in the calculation of the arithmetic mean, standard deviation, and 95% UCL.

^bFor the calculation of exposure point concentrations (EPCs):

If fewer than four samples are available, or the standard deviation of the data set is zero, the distribution is undetermined.

If the probability plot correlation coefficient of the untransformed data is > or = to the critical value, the distribution is normal.

In all other cases, the distribution assumed for the EPC calculation was lognormal.

^cThe exposure point concentration (EPC) is the 95% upper confidence (UCL) of the arithmetic mean, unless the 95% UCL exceeds the maximum detected value.

If the latter is true, the maximum detected value is substituted as the EPC (denoted by a "#" next to the EPC).

-- Parameter detected in all samples.
